

ROSLAN COIN

(RSL)

THE VIEW

Unification of transactional investment token for proper capitation has been the problem of most investors.

Most hedge fund managers usually encounter problem of proper currency adoption for unified portfolio management token that guarantee easy access to funds both for deposit and withdrawal.

Hence, due to rapid price changes in other crypto pairs such as Bitcoin and its derivatives the challenge is still present for most users.

THE SOLUTION / THE USE CASE

Roslan Coin (RSL) is the solution to all merchants, investment and portfolio managers, traders and investors on suitability for easy payment settle.

The intent for the development of RSL is to allow a uniform coin identification for all holders to understand their investment value.

RSL will serve as the best token for trading and investing although the initial intent was as a shopping token.

DECENTRALIZED PLATFORM

RSL runs on Binance Smart Chain (BSC BNB)

WHY BNB SMART CHAIN (BSC)?

Binance Smart Chain is live on mainnet, activating the parallel blockchain to Binance Chain that will enable the creation of smart contracts and the staking mechanism for BNB. Any interested individuals and/or organizations can gather BNB stakes to become a validator of this new blockchain.

Five months since it was first unveiled in April 2020, the Binance Chain community has activated the Binance Smart Chain (BSC). Created to run parallel to Binance Chain, BSC enables the creation of smart contracts for tokens on the Binance-branded blockchain. It also introduces an all-new staking mechanism for BNB, one of the world's top cryptocurrencies.

The launch of BSC, an Ethereum Virtual Machine-compatible blockchain that is ready to be tested and piloted by some of the top projects in the crypto industry, is expected to greatly increase the utility of both Binance Chain and BNB. With the introduction of the Proof of Staked Authority (PoSA) consensus mechanism, BSC creates an ecosystem where validators, token holders, developers, and users all benefit from a rewarding blockchain that offers high performance and ample space for further innovations.

The Binance Chain community launched BSC in time for the DeFi (decentralized finance) revolution, as the public shows increased interest in alternative financial solutions powered by blockchain. With BSC's launch, DeFi projects and the bigger blockchain community can leverage the best that Binance Chain has to offer, fortified by smart contract support, cross-chain interoperability, and more advantages that BSC brings.

THE RSL – BSC ADOPTION

A growing ecosystem of millions of users across Binance and Binance DEX makes it the perfect platform for RSL to thrive. RSL/BSC relationship will lead to more growth as more users acquire RSL and use it for its use-case.

RSL and BSC share the same token universe for BNB.

RSL will run on BSC in the same way as ETH runs on Ethereum so that it remains as “native token” for ROSLAN COIN.

INITIAL SUPPLY

2,000,000,000 RSL

RSL PROPERTY

- Minting supported
RSL can be minted to increase supply.
- Burn supported
RSL burn feature was implemented on creation to enable supply check.

Cross-Chain Transfer

The cross-chain transfer is the key communication between the two blockchains.

Essentially the logic is:

- the transfer-out blockchain will lock the amount from source owner addresses into a system controlled address/contracts;
- the transfer-in blockchain will unlock the amount from the system controlled address/contracts and send it to target addresses.
